

## **(I) Criteria for assessing institutional capacities**

This criteria was designed by high level management expert / Dr. Abdul Mutti Assaf, and based on an integrated model for designing of various organizations, in different areas of disciplines or functions. One of the most important peculiarities of this standard is that it was not based on a number of selected variables, likewise other adopted criteria globally and in MENA region, our (I) Criteria model for assessing organizations was based on an integrated design of the organization model, the main components of the organization were identified , moreover, the main and sub-variables of each component were identified and defined, consequently all indicators related to each variable were determined

The number of major components was five components and the number of variables was about 130 variables, and the number of indicators were up to 750 indicators, taking into account differences between indicators and variables depending on the typology of each organization .

(I)Criteria are divided into :

**I:(I)** Criteria for assessing the institutional capacity of philanthropic organizations; corporations

**II:** (I)Criteria for assessing the institutional capacity of business enterprises

**III:** (I)Criteria for assessing the institutional capacity of public institutions in any national state

**IV:**(I) Criteria for assessing the institutional capacity of Local administration and local government.

**V:**(I) Criteria for assessing the institutional capacity of Government Ministries and central agencies in any state.

- This integrated institutional capacity assessment Criteria /System is now undergoing conversion into a software and application in collaboration with reputable company (**The Spectra for Projects Management & Development**), Amman/Jordan.
